DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The language that is unclear in claim 1 states: "controlling the optical preamplifier in an automatic gain control mode when it is in routine operation, and executing an automatic level control in each specified period when it is in routine operation".

Does the pre-amplifier operate in both AGC and ALC modes during the period of routine operation or are there specified time intervals during routine operation when the pre-amplifier is switched to ALC mode from AGC mode?

Applicant is required to clarify the meaning of this language.

It would also be of benefit to point out the parts of the specification that best define the meaning of this language.

Lines 8-10 of claim 9 also have the same problem as claim 1.

Claims 2-8 and 10-16 are unclear because they are derived from claims 1 and 9:

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 10/083,162

Art Unit: 3663

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Zhang et al.

Zhang et al disclose an optical node comprising: an optical pre-amplifier (G2); an optical post-amplifier (G3); means (19a) for automatic gain control of the post-amplifier; and means (160 for controlling the level of the pre-amplifier.

This structure reads on the limitation of claims 1 and 9 that are presently understood.

No determination of patentability of claims 2-8 and 10-16 can be made at this time because of the indefinite status of parent claims 1 and 9.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references cited show the level of skill in the art pertaining to claims 1-16.

Any inquiry concerning this communication should be directed to Mark Hellner at telephone number 703 306 4155.
